

UI Styles and Formats for Galvinus HR Portal

Introduction

This document explains the styling and formatting rules for Galvinus Products' UI. It helps keep the design consistent, easy to update, and faster to build.

Key Principles

1. Global Reset

- **CSS Reset:** Apply a global reset to eliminate inconsistencies across browsers. Use `* { margin: 0; padding: 0; box-sizing: border-box; }` universally.

2. Typography

- **Primary Font:** Use 'Lato', Arial, Helvetica, sans-serif for body text.
- **Heading Styling:** Headings (h1–h6) should have clear font sizes, weights, and consistent line spacing.
- **Title Font Size:** 24px
- **Subtitle Font Size:** 15px

3. Color Palette

- **Active Color:** #eef2ff
- **Hover Color:** #efefff
- **Sidebar Border Right Color:** 4px solid #1d2a60;

4. Buttons

- **Default Button Styles:**
 - Border Radius: 8px
 - Background Color: #00102e
 - Font Size: 15px

5. Responsive Design

- Use **media queries** to adjust layouts for smaller screens.
 - Breakpoints: 1040px, 768px, and 480px.
- Ensure touch-friendly controls for buttons and inputs.

6. Forms

- Border-Radius: 8px;

7. Icons and Social Buttons

- **Icons:** Use Lucid-React icons
- **Icon Size:** 1.5 rem
- **Social Buttons:** Keep a consistent gap of 10px between icons.

8. Consistency Across Components

- Adopt modular classes and reusable components for consistency.
- Example: The `.form-input` and `.form-btn` classes should be shared across all forms in the application.
